BC, the first of which was the 1993 study by the National Institute of Mental Health (NIMH) and the University of California, San Francisco (UCSF). This study found that 15% of the general population had a history of trauma, and that 10% of the general population had a history of trauma that was severe enough to require treatment. The study also found that 10% of the general population had a history of trauma that was severe enough to require treatment. The study also found that 10% of the general population had a history of trauma that was severe enough to require treatment.
